COOPERATIVE LEARNING: A STRATEGY FOR EFFECTIVE CLASSROOM TEACHING IN SOCIAL SCIENCE (An Empirical Study)

This work is based on the assumption that social science education includes the study of history, geography, economics, sociology, and psychology. In this context, the author has attempted to develop a model of social science education that is based on cooperative learning.

The approach is designed to enable students to develop critical thinking skills and to understand the complex interrelationships among social science concepts. The book is divided into four parts: Part I introduces the concept of social science education and its relationship to cooperative learning; Part II describes the implementation of cooperative learning in social science education; Part III presents case studies of successful social science education programs; and Part IV discusses the future of social science education and cooperative learning.

The book is written in an accessible and engaging style, and it is suitable for use as a textbook in social science education courses. It is also a valuable resource for educators who are interested in the benefits of cooperative learning in their classrooms.

Group Investigation - a method for classroom instruction in which students work collaboratively in small groups, and take an active part in establishing their learning goals - continues to gain popularity. With increased interest has come the need for a comprehensive work on the subject. In this book, the authors provide an explanation of the philosophy, foundations, and current practice of Group Investigation. The authors give suggestions for ways of developing in a class the necessary discussion and cooperative skills, as well as detailed examples of projects in elementary and upper grades. In addition, they maintain the experiential evidence of the method's effectiveness. The literature includes a postscript to the experimental evidence. The authors conclude with a presentation of two training programmes: one for teachers applying Group Investigation for the first time, and the other for those with some experience in cooperative learning who wish to expand and refine their techniques.
